1. The indicated allowability of claims 2-6, 9 is withdrawn in view of the newly discovered reference(s) to Terry et al. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Terry et al.

Terry et al discloses a method and an apparatus for higher dimensional modulation comprising the following claimed limitations:

In claims 1-6, 10-25, “a symmetrical spherical quadrature amplitude modulation constellation in a multidimensional complex plane” (Abstract, col. 3, lines 48-col. 4, line 35); “a mapper for mapping the binary stream of bits onto the symmetric spherical QAM constellation” (Fig. 3, 306).

In claims 7-9, “receiving a binary data stream” and “segmenting the binary data stream” (col. 3, lines 38-50).

Art Unit: 2634

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hochwald et al discloses a method and apparatus for transmitting and receiving signals wherein symbols are mapped using spherical QAM constellation.
